

Remodel Primer - Get Educated Now: The devil is in the details; are you properly prepared for the remodel work you are committing to now?

The Remodel Primer Track will prepare you to tackle remodel projects, both large and small. Do you know what to look for when inspecting a pool or backyard when preparing a remodel bid? These classes will begin with an overview of concrete pool construction and focus on the topics that have the biggest impact on the integrity of the shell. Learn how to identify potential problems as well as the “best practices and common terminology” remediation for each problem. Accountability and liability will be discussed. Repairs, Remediation and Replacement will be included. Bill Drakeley will focus on the shell and construction practices. Randy Dukes and Jon Temple will focus on Cause and Effect Relations and how to identify the problems that need to be addressed prior to apply new surfaces.

8:45 AM – 10:15 AM	Remodel Primer – Session 1 Quality Pool Shell Construction An overview of concrete pool construction do’s and don’ts with intended parameters for water tight, ACI and ASA approved concrete placement. Bill Drakeley
10:15 AM – 10:30 AM	BREAK
